

**ON-DEMAND WEBINAR**

**Plastic litter: Where does it end up in coastal waters?**

To help reduce the millions of tonnes of plastic debris currently floating in our waters, it's imperative for cleanup systems to be actively deployed. Watch this pre-recorded, 45-minute webinar to discover how ABM Lab, DHI's premier agent-based modelling tool, can support your clean-up initiatives.

**Plastic Litter: Where Does it End Up in Coastal Waters?**

Learn how agent-based modelling can be used to identify the best sites to place cleanup systems to trap the maximum amount of marine debris.

To help reduce the millions of tonnes of plastic debris currently floating in our waters, it's imperative for cleanup systems to be actively deployed. Discover how ABM Lab, DHI's premier agent-based modelling tool, has successfully supported this initiative across the globe (~30 min).

2. At the bottom, there's a link that says "Get inspired" and I thought it would go to blogs or share people's stories. However, it went to a "Case stories" page which isn't inaccurate. However, it would've been less confusing to have just named the link "Case stories"

Just rename the link from "Get inspired" to "Case stories".

DHI are the first people you should call when you have a tough challenge to solve in a water environment – be it a river, a reservoir, an ocean, a coastline, within a city or a factory. Our knowledge of water environments is second-to-none. It represents more than 50 years of experience and expertise, and is used by more than 140 countries. We strive to make this knowledge globally accessible to clients and partners by channelling it through our local teams and unique expertise. Our world is water. So when you need to save water, share it fair, protect its quality, quantify its needs or manage its flow, we can help. Our knowledge, combined with our team's expertise and the power of our technology, holds the key to unlocking the right solution.

3. The dropdown button for the menu is a down arrow which matches expectations. However, the button does not change to an up-pointing arrow to minimize the menu.

I would ask them to make the website more dynamic and change the arrow to be an upward facing one.

### 3. User control and freedom

*Users have the flexibility to move through states or conduct certain actions as they please without going through cumbersome processes.*

1. On the home page there are many pages I can go explore. However, as soon as I click on one page I don't have the option to go and explore the other pages. This is really annoying because I need to keep clicking the browser back button and waiting for it to load.

There should be the same bar at the top that has a dropdown with the same pages so that I can navigate to the other ones. Or an arrow could be added to the sides to let users move left and right between pages; however this isn't as flexible as having the menu. Lastly, there could also be a side bar that lists out all the pages and from there, a user can move freely between pages.

3
